Vertical multi-stage pump

Pump

The BMV pump is driven by a standard electric motor. The motor output shaft directly connects with the pump shaft through a coupling. The pressure-resistant cylinder and flow passage components are fixed between pump head and inlet & outlet section with stay bolts. The inlet and outlet are located at the pump bottom at the same plane. This kind of pump can be equipped with an intelligent protector to effectively prevent it from dry-running, out-of-phase and overload.

Premium efficiency motor

- ▶ Totally enclosed, fan-cooled, standard efficiency.
- ▶ 2 pole, 3 phase, 60 Hz, 230 / 460 volt.
- ▶ IP55 protection class.
- ▶ Class "F" insulation.

Operation conditions

- ▶ Thin, clean, non-flammable and non-explosive liquid containing, no solid granules and fibers.
- ▶ Liquid temperature:
 - Normal temperature: -15 °C~+70 °C
 - Hot water type: -15 °C~+105 °C
- ▶ Ambient temperature: hasta +40 °C
- ▶ Altitude: up to 1000 m

Application

The BMV pump is vertical multi-stage centrifugal pump, the pipeline structure can ensure that the pump can be directly installed in the pipeline system which pipe diameters are the same and the outlet and inlet at the same level. This design of structure makes the connection from pump to pipe more compact. Have different specifications and different series, to meet the requirement of flow rate and pressure. Can transfer not only water but also various industrial liquid medium, suitable for different temperature, flow rate and pressure range. BMV is suitable for mild corrosive liquid.

Water supply:

- ▶ Water filtering and conveying.
- ▶ Water partition.
- ▶ Net pressure boosting for high-rise buildings.
- ▶ Industrial water pressure boosting.

Delivery:

- ▶ Oil and alcohol.
- ▶ Acid and alkali.
- ▶ Ethylene, glycol and coolant.

Industrial boosting:

- ▶ Process water system.
- ▶ Cleaning system.
- ▶ High pressure washing system.
- ▶ Fire-fighting system.
- ▶ Car cleaning.

Water treatment:

- ▶ Ultrafiltration system.
- ▶ Reverse osmosis system.
- ▶ Separator

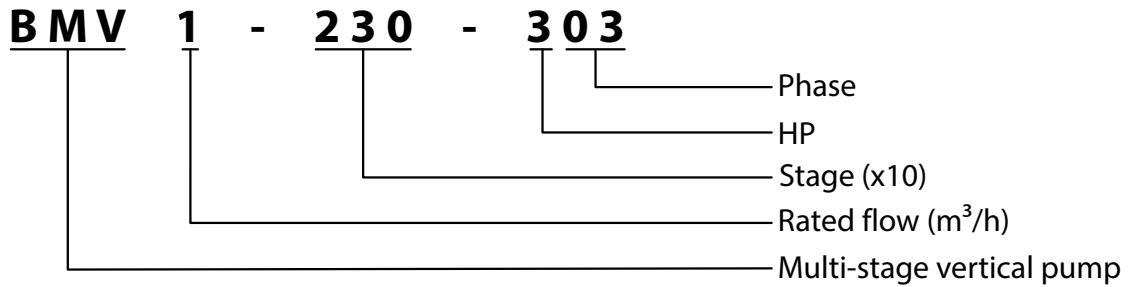

Industrial liquid transportation:

- ▶ Cooling and air conditioning system.
- ▶ Boiler feed water system.
- ▶ Temperature system.
- ▶ Machine matching.

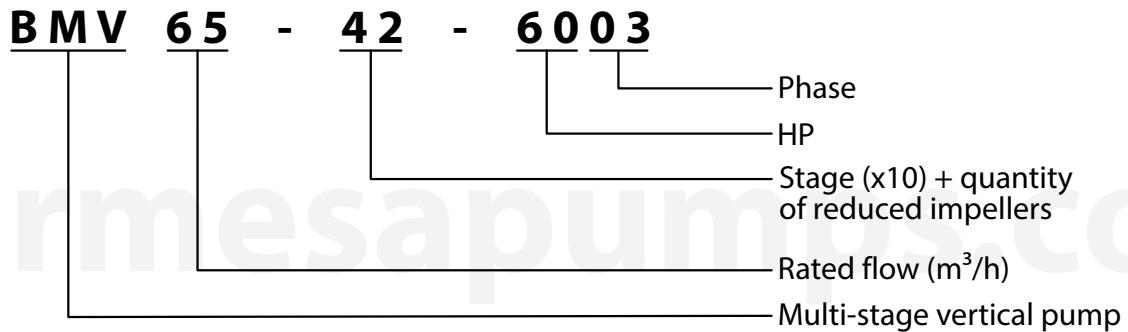

Irrigation:

- ▶ Region irrigation.
- ▶ Sprinkler irrigation.
- ▶ Drip irrigation.

NPSH & operation in parallel

Minimum inlet pressure NPSH

In case that the pressure in pump is lower than the steam pressure used to convey liquid, the cavitations will occur. To avoid cavitations, a minimum pressure at the inlet side of the pump shall be guaranteed. The maximum suction pressure can be calculated with following formula:

$$H = Pb \times 10.2 - NPSH - Hf - Hv - Hs$$

Pb = atmosphere pressure [bar]

(can be set as 1 bar)

In a closed system, **Pb** means system pressure [bar].

NPSH = net positive suction head [m] (It can be read out from the point of possible max. flow rate shown on NPSH curve).

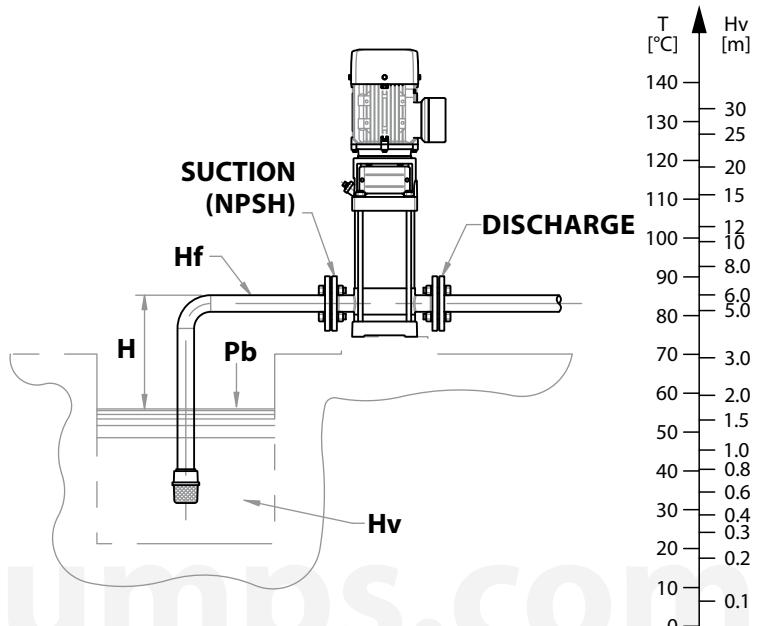

Hf = pipeline loss at the inlet [m].

Hv = steam pressure [m].

Hs = safety margin = minimum 0.5 m delivery head.

If the calculated result **H** is positive, the pump may run under the max. suction pressure **H**.

In case the calculated result **H** is negative, a delivery head of min. inlet pressure is necessary.

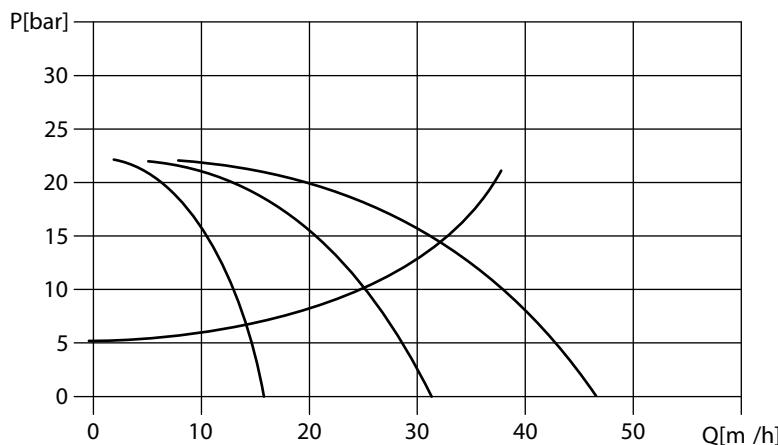

Check and ensure that the pump is not at cavitations state.

Operation in parallel

Connecting several pumps in parallel running will benefit much more than running a single large pump.

- ▶ Applicable to different working states necessary in a variable flow system.
- ▶ Increasing the possibility of water supply when the pump is in failure. Because in case of pump failure, only part of the system flow is affected.

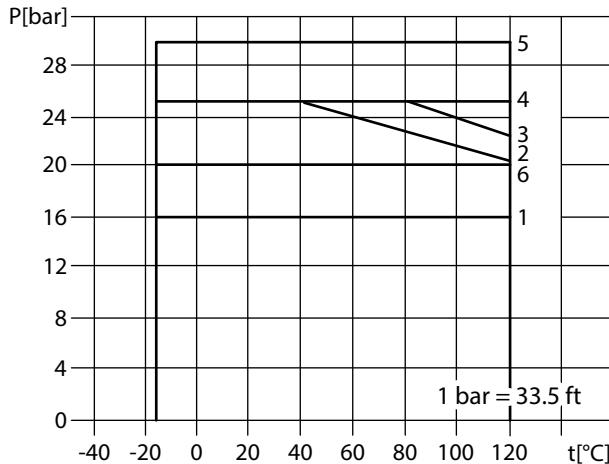

Two pumps or more can be connected in parallel running if necessary.

Max. pressure & temperature

Max. working pressure

The following figure shows the limitation of pressure and temperature, which shall be in the scope as shown in the figure.

barmesapumps.com

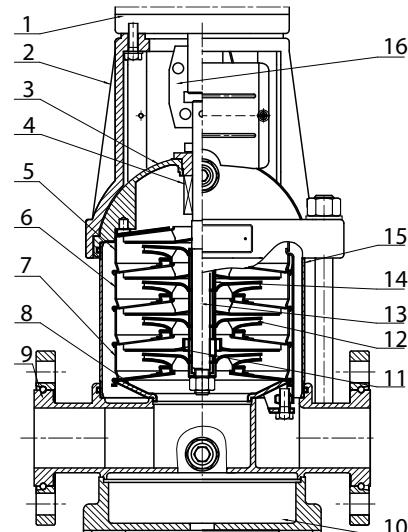

Max. ambient temperature

When the pump operates under ambient temperature higher than 40 °C or under altitude higher than 1000 m, because of low air density and poor cooling effects, the motor output power P2 will be decreased to certain extent. If the pump is operated under the above-said conditions, it should be equipped with motor of higher power.
